Steel Summit in Cincinnati is Growing

A new 31,000 square foot two story office and crane building addition will allow Steel Summit's Cincinnati location to accommodate their growing needs. The new building was designed using pre-engineered building framing with standing seam roofs, metal siding, and a combination of concrete and glazing to wrap the new two story office. The project also includes re-locating the current parking lot and the addition of a depressed truck dock.

This project was awarded to Bruns General Contracting after the completion of a small maintenance building addition to the same facility in 2011, by Bruns.

SK Tech in Clayton is Adding On

Bruns General Contracting has been hired to construct a new 30,800 square foot building, truck dock, and parking lot addition to the existing SK Tech facility located at 200 Metro Drive in Clayton, Ohio.

The building will be constructed using pre-engineered building framing with a standing seam metal roof. The front and rear sidewalls will be constructed using Autoclaved Aerated Concrete (AAC) panels supplied by Performance Concrete Products and finished to match the colors and profiles of the last building addition which Bruns built in 2004. The new end wall will be constructed of matching metal siding to easily accommodate any future expansions.
